|            |                      |                          |                       |                |
|------------|----------------------|--------------------------|-----------------------|----------------|
| Normal GFR | Mild decrease in GFR | Moderate decrease in GFR | Sever decrease in GFR | Kidney Failure |
| >90        | 60 - 89              | 30 - 59                  | 15 - 29               | <15            |

**Note:**

1. National Kidney Disease Education program recommends the use of MDRD equation to estimate or predict GFR in adults (>=20 years) with Chronic Kidney Disease (CKD)

2. MDRD equation is most accurate for GFR <=60 mL/min/1.7m2

Critical value of Creatinine established as per laboratory policy: Adult : > 5.0

Such critical value if obtained needs urgent medical attention

The biological reference range pertains to the age and sex of the Patient.
