DIAGNOSTICS & SPECIALTY CLINICS

Your Right to Right Healthcare...

Laboratory | Radiology | Polyclinic | Pharmacy

Barcode No	89781461	Lab No	16952503300005
Patient Name	Mrs.SHILPI	Reg Date	30/Mar/2025 03:06PM
Age/Sex	32 YRS/Female	Sample Coll. Date	30/Mar/2025 02:09 PM
Referred By	SELF	Sample Rec.Date	31/Mar/2025 09:23 AM
		Report Date	31/Mar/2025 10:48AM

IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
HIV I & II Quantitative (HIV-DUO)			
HIV 1/2 & p24 (HIV Combi) ECLIA	0.24	AI	<1.0: Negative
Serum, Electro Chem Luminiscent Immuno Assay			

Comments :

HIV p24 antigen in blood specimen of recently infected patients can be detected as early as 2-3 weeks after infection. Anti-HIV antibodies are detectable in serum from around 4 weeks post infection. The combined detection of HIV p24 antigen and anti-HIV antibodies in 4th generation HIV screening assays leads to improved sensitivity and therefore a shorter diagnostic window compared to traditional anti-HIV assays.

The assay uses recombinant antigens derived from the env- and pol-region of HIV-1 (including group O) and HIV-2 to determine HIV-specific antibodies. For the detection of HIV-1 p24 antigen specific monoclonal antibodies are used. Repeatedly reactive samples must be confirmed according to recommended confirmatory algorithms. Confirmatory tests include Western Blot and HIV RNA tests.

Remark:

1. Non Reactive result implies that no Anti HIV-I OR HIV-II Antibodies have been detected in the sample by this method. This means that either the patient has not exposed to HIV-I Or HIV-II infection or the sample has been tested during the "WINDOW PHASE"(before the development of detectable levels of antibodies). Hence negative result does not exclude the possibility of exposure to or infection with HIV-I/HIV-II.

2. It is a screening test and reactive samples need to confirmed by alternate method like western blot or PCR

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
