Patient Name	Mrs. POONAM SHARMA	Reg Date	29/Sep/2024 01:26PM
Age/Sex	48 YRS/Female	Sample Coll. Date	29/Sep/2024 12:27 PM
Referred By	SELF	Sample Rec. Date	30/Sep/2024 08:40 AM
		Report Date	30/Sep/2024 10:29AM

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref. Interval
D- Dimer			
D-Dimer	0.78	µg FEU/mL	<0.5
D-Dimer (ng/mL)	390	ng DDU/mL	0-250
Plasma Citrate, Immunoturbidometric			

Comment:

The D-Dimer assay is a nephelometric assay that utilizes antibodies coated latex particles. In the presence of D.dimer, the particle aggregate and light scattering increases. D-Dimer is one of the measurable by products of activation of the fibrinolytic system. It assesses fibrinolytic activation and intravascular thrombosis. D-dimer assays are characteristic for Disseminated Intravascular Coagulation (DIC) as this test demonstrates simultaneous presence of thrombin and plasmin formation. It can also be elevated in individuals with large vessel thrombosis, soft tissue hematomas, Pulmonary embolism, recent surgery, active or recent bleeding, pregnancy, liver disease, malignancy and hypercoagulable states. D-Dimer is of particular value in excluding the diagnosis of venous thromboembolism among patients at high risk.

Note:

1. Degree of D-dimer increase does not definitely correlate with the clinical severity of associated disease state
2. Increased levels have a high probability of Venous thromboembolism (VTE) and require clinical correlation.
3. Lipemia falsely decreases D-dimer levels .
4. This is only a professional opinion, not the diagnosis.
5. Above value are not reliable if the sample was not sent in cool conditions.

Dr. Anuja Adarsh, MBBS, MD
(Consultant Biochemist)
Reg. No. DMC-90705

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
Reg. No. DMC-53016
