HAEMATOLOGY

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Hemoglobin HPLC			
Hb F(Foetal Hb) Level	0.7	%	< 2.0
Peak 2	4.8	%	
Peak 3	2.4	%	<10
Hb A0	83.2	%	
HbA2	2.7	%	1.9 - 3.5
Opinion	Normal Pattern		
Advise	Please Correlate Clinically		

Comment:

Haemoglobinopathy is a kind of genetic defect that results in abnormal structure of one of the globin chains of the hemoglobin molecule. Hemoglobin variants are abnormal forms of hemoglobin.

- All results have to be correlated with age and history of blood transfusion. If there is history of blood transfusion in last 3 months, repeat testing after 3 months from last date of transfusion is recommended.
- In case of hemoglobinopathy, parents or family studies, DNA Analysis and Genetic counseling is advised.
- **P3 window**- Above 10% is often indicative of either denatured forms of hemoglobin (degenerated sample) or may suggest a possibility of abnormal hemoglobin variant. Hence, repeat analysis with fresh sample or DNA studies is advised.
- **P2 window**- Above 10% is indicative of either glycated hemoglobin requiring correlation with diabetic status or may suggest a possibility of abnormal hemoglobin variant requiring further DNA studies for confirmation.
- Screening of the spouse are strongly recommended, if pregnant woman have hemoglobinopathy.
- This test detects Beta thalassemia and hemoglobinopathies. DNA analysis is recommended to rule out alpha thalassemia and silent carriers.
- Mild to moderate increase in **fetal hemoglobin (HbF)** can be seen in some acquired conditions like Pregnancy, Megaloblastic anemia, Thyrotoxicosis, Hypoxic conditions, Chronic kidney disease, Recovering marrow, MDS, Aplastic anemia, PNH, Medications (Hydroxyurea, Erythropoietin, Butyrates) etc.
- Iron deficiency Anemia may be associated with **low HbA2** result and may mask thalassemia condition also.
- **Elevated levels of HbA2** are seen in Beta-Thalassemia, and also in other conditions like Sickle cell Alpha-Thalassemia, Megaloblastic Anemia, Unstable Hemoglobinopathies, Zidovudine-treated HIV patients, Congenital Dyserythropoietic Anemia (CDA) type 1 and Hyperthyroidism. *Results relate only to the sample, as received.
