

Barcode No	87943558	Lab No	16952410290003
Patient Name	Mrs.SABA KHAN	Reg Date	29/Oct/2024 01:09PM
Age/Sex	28 YRS/Female	Sample Coll. Date	29/Oct/2024 12:07 PM
Referred By	DR. FAROOQ BHAT	Sample Rec.Date	30/Oct/2024 07:41 AM
Report Date		30/Oct/2024 11:13AM	

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CCP Antibodies (Anti Cyclic Citrullinated Peptide Antibody)			
Anti CCP Serum, Electro Chemi Luminescent Immuno Assay	<8.00	U/ml	<17 Negative

COMMENT:

This test detects the presence of anti CCP antibodies in the serum. Anti-citrullinated protein/peptide antibodies (ACPAs) are autoantibodies (antibodies directed against one or more of the individual's own proteins) frequently detected in rheumatoid arthritis patients. Recently, these antibodies have turned up as powerful biomarkers, which are accepted as a major diagnostic tool in diagnosing rheumatoid arthritis (RA) already in a very early stage of disease. In patients with symptoms of rheumatoid arthritis, testing positive for both CCP antibodies and RF suggest that a patient is likely to have rheumatoid arthritis. Testing positive for CCP antibodies and negative for RF may indicate that a patient is likely to develop rheumatoid arthritis in the future or is already in the early stages. Testing negative for both CCP antibodies and RF indicates that a patient is less likely to have rheumatoid arthritis.

Dr. Anuja Adarsh, MBBS, MD
(Consultant Biochemist)
