.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology Result Unit Biological Ref.Interval

Estradiol (E2)

Estradiol [E2]

Electro. Chemil. Luminescent Immuno. Assay.

41.4

pg/mL

Normal Ranges of Estradiol (E2)

Group	Reference range (pg/mL)
Male	10 - 50
Female	Early Follicular phase
	20 - 150
	Late Follicular phase
	40 - 350
	Ovulatory phase
	150 - 750
	Luteal phase
	30 - 450
	Postmenopause
	< 21
	Pregnancy, first trimester
	215 - 4300

Age Group	Male	Female
1-5 year	3.0 - 10.0	5.0 - 10
6-9 years	3.0 - 10.0	5.0 - 60
10-11 years	5.0 - 10.0	5.0 - 300
12-14 years	5.0 - 30.0	24 - 410
15-17 years	5.0 - 43.0	40 - 410

Estradiol (E2) is the most important form of estrogen found in the body. Most of it is made in and secreted from the ovaries, adrenal cortex, and placenta. Estradiol is responsible for the development and function of reproductive organs and the formation of secondary sex characteristics in women. It promotes breast development and the growth of the outer genitals. E2 levels vary depending on a woman's age and reproductive status. They are a good marker of ovarian function. Though considered the main sex hormones for women, they are also found in men and play a role in bone metabolism and growth in both sexes.

Note: Drug Fulvestrant will increase the apparent concentration of estradiol in women being treated with this drug.
Kindly correlate with clinical conditions.

Test Name With Methodology **Result** **Unit** **Biological Ref.Interval**
Progesterone 0.208 ng/ml
Serum, Electro Chemi Luminescent Immuno Assay

Comment:

Group		Progesterone (ng/ml)
Male		0.2 - 1.4
Female	Follicular phase	0.2 - 1.5
	Ovulatory phase	0.8 - 3.0
	Luteal phase	1.7 - 27
	Postmenopause	0.1 - 0.8

Progesterone is a C-21 steroid hormone involved in the female menstrual cycle, pregnancy and embryogenesis of humans and other species. Progesterone is sometimes called the "hormone of pregnancy", and it has many roles relating to the development of the fetus. Progesterone levels may be monitored in women who have trouble maintaining a pregnancy, as low levels of the hormone can lead to miscarriage. If a woman is receiving progesterone injections to help support her early pregnancy, her progesterone levels may be monitored on a regular basis to help determine the effectiveness of that treatment. Increased progesterone levels also are seen occasionally with luteal ovarian cysts, molar pregnancies, and with a rare form of ovarian cancer.

Method: Fully Automated Bidirectionally Interfaced Electro Chemi Luminescent Immuno Assay
