Patient Name	Mrs.RANJEET KOUR	Reg Date	25/May/2024 03:43PM
Age/Sex	24 YRS/Female	Sample Coll. Date	25/May/2024 02:44 PM
Referred By	Dr. Arti Sharma	Sample Rec.Date	25/May/2024 07:51 AM
		Report Date	27/May/2024 09:20AM

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CA-125 (Ovarian Cancer Marker)			
CA 125 Level	10.19	U/mL	0.00 - 35.00
Serum, Electro Chemi Luminescent Immuno Assay			

Comment:

The Cancer Antigen 125 (CA-125) is a tumor marker or biomarker that is best known as a marker for ovarian cancer, But CA-125 has limited specificity for ovarian cancer because elevated CA-125 levels can be found in individuals without ovarian cancer. Hence this assay, regardless of level, should not be interpreted as absolute evidence for the presence or absence of malignant disease. The assay value should be used in conjunction with findings from clinical evaluation and other diagnostic procedures. This test is not recommended to screen Ovarian cancer in the general population.

CA-125 is used to monitor therapy during treatment for ovarian cancer. CA-125 is also used to detect relapse of cancer after treatment is complete. It may also be elevated in other malignant cancers, including those originating in the endometrium, fallopian tubes, lungs, breast and gastrointestinal tract. A number of normal and noncancerous conditions can cause an elevated CA 125 level, including:

- Endometriosis
- Liver disease (Cirrhosis, Hepatitis etc)
- Menstruation
- Pelvic inflammatory disease
- Pregnancy
- Uterine fibroids
- Ovarian Cyst
