Comment:

Carbohydrate antigen or Cancer antigen 19-9 (CA 19-9) is a modified Lewis(a) blood group antigen, and has been used as a tumor marker. An increase in the assay value of CA - 19.9 is frequently found in certain types of cancer (Pancreas, Colorectal), but also in certain non-cancerous pathologies also. The CA - 19.9 assay is used as an additional test for the prognosis & monitoring of therapy of patients with diagnosed malignant tumours. The CA - 19.9 assay level decreases after therapy & increases in cases of relapse, residual disease & metastasis.
