

Barcode No	87943816	Lab No	16952501040009
Patient Name	Mrs.REENA SHARMA	Reg Date	04/Jan/2025 06:44PM
Age/Sex	35 YRS/Female	Sample Coll. Date	04/Jan/2025 05:48 PM
Referred By	DR. BALVINDER SINGH	Sample Rec.Date	05/Jan/2025 10:47 AM
		Report Date	05/Jan/2025 01:03PM

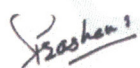

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CCP Antibodies (Anti Cyclic Citrullinated Peptide Antibody)			
Anti CCP Serum, Electro Chemi Luminescent Immuno Assay	274.0	U/ml	<17 Negative

COMMENT:

This test detects the presence of anti CCP antibodies in the serum. Anti-citrullinated protein/peptide antibodies (ACPAs) are autoantibodies (antibodies directed against one or more of the individual's own proteins) frequently detected in rheumatoid arthritis patients. Recently, these antibodies have turned up as powerful biomarkers, which are accepted as a major diagnostic tool in diagnosing rheumatoid arthritis (RA) already in a very early stage of disease. In patients with symptoms of rheumatoid arthritis, testing positive for both CCP antibodies and RF suggest that a patient is likely to have rheumatoid arthritis. Testing positive for CCP antibodies and negative for RF may indicate that a patient is likely to develop rheumatoid arthritis in the future or is already in the early stages. Testing negative for both CCP antibodies and RF indicates that a patient is less likely to have rheumatoid arthritis.

Dr. Anuja Adarsh, MBBS, MD
(Consultant Biochemist)
