**.IMMUNO BIOCHEMISTRY-1**

| Test Name With Methodology          | Result | Unit | Biological Ref.Interval |
|-------------------------------------|--------|------|-------------------------|
| <b>CPK- MB (Creatine Kinase MB)</b> |        |      |                         |
| CPK-MB                              | 2.68   | µg/L | 0.00 - 6.22             |

Serum, Electro Chemi Luminescent Immuno Assay

**COMMENT:**

CK-MB levels, along with total CK, are tested in persons who have chest pain to diagnose whether they have had a heart attack. Since a high total CK could indicate damage to either the heart or other muscles, CK-MB helps to distinguish between these two sources. The level of CK-MB in blood help to determine the efficacy of a clotdissolving drug in the following way: When the clot dissolves, CK-MB tends to rise and fall faster.

If the value of CK-MB is elevated and the ratio of CK-MB to total CK (relative index) is more than 2.5-3, it is likely that the heart was damaged. A high CK with a relative index below this value suggests that skeletal muscles were damaged.
