Your Right to Right Healthcare...

Laboratory | Radiology | Polyclinic | Pharmacy

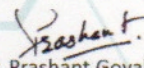

Barcode No	89781315	Lab No	16952502240004
Patient Name	Mrs. ALTI DEVI	Reg Date	24/Feb/2025 07:48PM
Age/Sex	34 YRS/Female	Sample Coll. Date	24/Feb/2025 06:44 PM
Referred By	DR. BALVINDER SINGH	Sample Rec.Date	25/Feb/2025 09:10 AM
Client	AP081899 Hexamed Healthcare Services LLP		
Code/Name			
Ref. Lab/Hosp	Report Date 25/Feb/2025 10:49AM		
Panel Address	Hexameds Diagnostics and Speciality Clinic, # 25-270/6, Main Bypass road, NH-1A, Channi Himat Jammu,		

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CCP Antibodies (Anti Cyclic Citrullinated Peptide Antibody)			
Anti CCP Serum, Electro Chemi Luminescent Immuno Assay	>500	U/ml	<17 Negative

COMMENT:

This test detects the presence of anti CCP antibodies in the serum. Anti-citrullinated protein/peptide antibodies (ACPAs) are autoantibodies (antibodies directed against one or more of the individual's own proteins) frequently detected in rheumatoid arthritis patients. Recently, these antibodies have turned up as powerful biomarkers, which are accepted as a major diagnostic tool in diagnosing rheumatoid arthritis (RA) already in a very early stage of disease. In patients with symptoms of rheumatoid arthritis, testing positive for both CCP antibodies and RF suggest that a patient is likely to have rheumatoid arthritis. Testing positive for CCP antibodies and negative for RF may indicate that a patient is likely to develop rheumatoid arthritis in the future or is already in the early stages. Testing negative for both CCP antibodies and RF indicates that a patient is less likely to have rheumatoid arthritis.

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
