Barcode No	89781349	Lab No	16952503010004
Patient Name	Mrs.RAJ KOUR	Reg Date	01/Mar/2025 08:23PM
Age/Sex	50 YRS/Female	Sample Coll. Date	01/Mar/2025 07:26 PM
Referred By	SELF	Sample Rec.Date	02/Mar/2025 08:59 AM
		Report Date	02/Mar/2025 10:32AM

CLINICAL PATHOLOGY

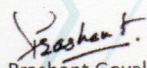

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Protein 24 hrs Urine			
Volume	1700	ml	
Urine Protein	164.6	mg/dL	0 - 14
Benzethonium Chloride			
Urine Protein (24 hrs)	2798.2	mg/24 hrs	21.3-119.6
Calculated			

COMMENTS:

Proteinuria is a condition characterized by the presence of greater than normal amounts of protein in the urine. It is usually associated with some kind of disease or abnormality but may occasionally be seen in healthy individuals. A 24-hour urine sample gives the protein elimination rate over 24 hours. It will be accurate only if all of the urine is collected.

Protein detected in urine sample may be temporary due to an infection (UTI), fever, medication, vigorous exercise, pregnancy, diet, cold exposure, or emotional or physical stress. Testing should be repeated after these conditions have resolved.

Persistent and/or an increased amount of protein in the urine may indicate kidney damage or disease. With kidney disease, the amount of protein present is generally associated with the severity of the damage. Increasing amounts of protein over time indicate increasing damage and decreasing kidney function.

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
Reg. No. DMC-53016
