Age/Sex	22 YRS/Male	Sample Coll. Date	07/Mar/2025 02:38 PM
Referred By	SELF	Sample Rec.Date	08/Mar/2025 07:29 AM
		Report Date	08/Mar/2025 08:57AM

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Cortisol [Morning] Serum, Electro Chemi Luminescent Immuno Assay	9.43	µg/dL	4.82 - 19.5

COMMENTS:

Cortisol is produced and secreted by the adrenal glands. Cortisol is a hormone that plays a role in the metabolism of proteins, lipids, and carbohydrates. It affects blood glucose levels, helps maintain blood pressure, and helps regulate the immune system. The level of cortisol in the blood (as well as the urine and saliva) normally rises and falls in a "diurnal variation" pattern. It peaks early in the morning, then declines throughout the day, reaching its lowest level about midnight. This pattern can change when a person works irregular shifts (such as the night shift) and sleeps at different times of the day, and it can become disrupted when a disease or condition either limits or stimulates cortisol production.

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
Reg. No. DMC-53016
