IMMUNOLOGY SPE

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Dual Marker			
PAPP-A (Pregnancy Associated Plasma Protein A) Chemiluminescent immunoassay (CLIA)	4675.1	ng/ml	
Beta Hcg Titer Chemiluminescent immunoassay (CLIA)	85479	mIU/mL	

Statistical evaluation of **Dual Marker** has been done using **Benetech PRA** software.

The test is valid between 10 Weeks to 13 weeks & 6 days of gestation.

Dual or Double marker test in first trimester, identifies pregnancies that have a high risk of babies having the following chromosomal abnormalities:

1. Trisomy 21 (Down syndrome)
2. Combined Trisomy 13 (Patau syndrome)/ Trisomy 18 (Edwards syndrome)

This Screening test is NOT a diagnostic test (it cannot tell whether the baby has any of the above conditions); it only identifies the risk of the baby being affected. A confirmatory test may be needed when the screening test is positive (high risk)

The interpretive unit is MoM (Multiples of Median) which takes into account variables such as gestational age (ultrasound), maternal weight, race, insulin dependent Diabetes, multiple gestation, IVF (Date of Birth of Donor, if applicable), smoking & previous history of Down syndrome. Accurate availability of this data for Risk Calculation is critical.

Dr. Prashant Goyal (DCP)
(Director & Chief Pathologist)
Reg. No. DMC-53016

DUAL MARKER

Patient Name: Mrs. KHUSHI SHARMA
Race: INDIAN
Physician:

Code: 89781388
DOB: 21/03/2001
Reported: 11/03/2025

CLINICAL INFORMATION

Estimation Method: by U/S (13 wks 4 days on 08/03/2025)
Age at Term: 24.5 years
EDD: 09/09/2025
Gestation: Singleton
Maternal History: IDDM(U), SMOKER(U), IVF(U)
Gestational Age: 13 weeks 6 days
Referring Lab #: 89781388
Specimen Code: 89781388
Specimen Date: 10/03/2025
Received Date: 11/03/2025
Weight: 67.0 kg
Screening Status: Initial sample
Para / Gravida: 0 / 0

REMARKS

Down Syndrome

The risk of Down syndrome is LESS than the screening cut-off.

Trisomy 18/13

The risk of trisomy 18 is less than the screening cut-off.

ULTRASOUND

Sonographer: 000

Ultrasound Date: 08/03/2025

CRL: 75.0 mm **NB:** Present
NT: 1.2 mm **0.65 MoM** -0.65Δ

BIOCHEMISTRY

MARKER	RESULT	MoM
PAPP-A	4675.10 ng/ml	1.80
hCG (T1)	85479.0 mIU/ml	0.93

INTERPRETATION

Down Syndrome: Screen Negative

Trisomy 18/13: Screen Negative

CLINICAL RESULTS (at term)

The calculated risk by Benetech depends on the accuracy of the information Provided by the referring physician. Please note that calculation are statistical approaches and have no diagnostic value.

HAEMATOLOGY

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Haemoglobin HPLC			
Hb F(Foetal Hb) Level	1.7	%	< 2.0
Peak 2	4.1	%	
Peak 3	0.5	%	<10
Hb A0	82.1	%	
HbA2	3.1	%	1.9 - 3.5
Hb D (Punjab)	0.0	%	<0.02
Hb Sickle	0.0	%	<0.02
Hb C	0.0	%	<0.02
Hb E	0.0	%	<0.02
Opinion	Normal Pattern		
Advise	Please Correlate Clinically		

Comment:

Haemoglobinopathy is a kind of genetic defect that results in abnormal structure of one of the globin chains of the hemoglobin molecule. Hemoglobin variants are abnormal forms of hemoglobin. All results have to be correlated with age and history of blood transfusion. If there is history of blood transfusion in last 3 months, repeat testing after 3 months from last date of transfusion is recommended. **In case of hemoglobinopathy, parents or family studies, DNA Analysis and Genetic counseling is advised.**

- ~ **P3 window-** Above 10% is often indicative of either denatured forms of hemoglobin (degenerated sample) or may suggest a possibility of abnormal hemoglobin variant. Hence, repeat analysis with fresh sample or DNA studies is advised.
 - ~ **P2 window-** Above 10% is indicative of either glycated hemoglobin requiring correlation with diabetic status or may suggest a possibility of abnormal hemoglobin variant requiring further DNA studies for confirmation.
 - ~ Screening of the spouse are strongly recommended, if pregnant woman have hemoglobinopathy.
 - ~ This test detects Beta thalassemia and hemoglobinopathies. DNA analysis is recommended to rule out alpha thalassemia and silent carriers.
 - ~ Mild to moderate increase in **fetal hemoglobin (HbF)** can be seen in some acquired conditions like Pregnancy, Megaloblastic anemia, Thyrotoxicosis, Hypoxic conditions, Chronic kidney disease, Recovering marrow, MDS, Aplastic anemia, PNH, Medications (Hydroxyurea, Erythropoietin, Butyrate) etc.
 - ~ Iron deficiency Anemia may be associated with **low HbA2** result and may mask thalassemia condition also.
 - ~ **Elevated levels of HbA2** are seen in Beta-Thalassemia, and also in other conditions like Sickle cell Alpha-Thalassemia, Megaloblastic Anemia, Unstable Hemoglobinopathies, Zidovudine- treated HIV patients, Congenital Dyserythropoietic Anemia (CDA) type 1 and Hyperthyroidism.
- *Results relate only to the sample, as received.
