Laboratory | Radiology | Polyclinic | Pharmacy

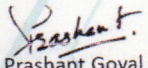

Barcode No	87943879	Lab No	16952503120002
Patient Name	Mrs. POOJA	Reg Date	12/Mar/2025 07:15PM
Age/Sex	39 YRS/Female	Sample Coll. Date	12/Mar/2025 06:17 PM
Referred By	SELF	Sample Rec.Date	13/Mar/2025 08:13 AM
Report Date		13/Mar/2025 10:31AM	

Test Name With Methodology	Result	Unit	Biological Ref.Interval
IMMUNOASSAY			
TORCH 4 IgM PROFILE (CLIA)			
Toxoplasma IgM CLIA	0.38	AU/ML	<2.0 Negative 2.0-2.6 Gray Zone >2.6 Positive.
Rubella IgM CLIA	0.03	AU/ML	<2.0 Negative 2.0-3.0 Gray Zone >3.0 Positive.
CMV IgM CLIA	0.11	AU/ML	<2.0 Negative 2.0-4.2 Gray Zone >4.2 Positive.
HSV 1&2 IgM CLIA	0.16	AU/ML	<2.0 Negative 2.0-4.0 Gray Zone >4.0 Positive.

Comment :

This test detects the IgM type of antibodies against Toxoplasma, Rubella, Cytomegalovirus (CMV), Herpes Simplex Virus (HSV). These can cause birth defects in newborns and illness in adults. Presence of IgM antibodies in the newborn indicates high likelihood of infection with that organism. IgM antibodies produced in the mother cannot cross the placenta so presence of this type of antibody strongly suggests an active infection in the infant. Presence of IgG and absence of IgM antibody in the infant may reflect passive transfer of maternal antibody to the baby and does not indicate active infection in the baby.

Likewise, the presence of IgM antibody in the pregnant woman suggests a new infection with the virus or parasite. Further testing must be done to confirm these results since IgM antibody may be present for other reason. IgG antibody in the pregnant woman may be a sign of past infection with one of these infectious agents. By testing a second blood sample drawn two weeks later, the level of antibody can be compared. If the second blood draw shows an increase in IgG antibody, it may indicate a recent infection with the infectious agent.

.IMMUNO BIOCHEMISTRY-1

Test Name With Methodology	Result	Unit	Biological Ref.Interval
Insulin Fasting Insulin Fasting Serum, Electro Chemi Luminescent Immuno Assay	7.75	uIU/mL	2.6-24.9

Comment:

This test is used to estimate the levels of Insulin in serum. This may be used to diagnose insulinomas and to help diagnose acute or chronic (fasting) hypoglycemia. Insulin levels may also be used to monitor endogenous insulin, check for insulin resistance, and to help determine when a type 2 diabetic might need to start taking insulin injections to supplement oral medications.
