

Barcode No	87943889	Lab No	16952503160002
Patient Name	Mrs.SHANTA BHASIN	Reg Date	16/Mar/2025 12:17PM
Age/Sex	82 YRS/Female	Sample Coll. Date	16/Mar/2025 11:20 AM
Referred By	DR. NNIAC	Sample Rec.Date	17/Mar/2025 08:49 AM
Client	AP081899 Hexamed Healthcare Services LLP		
Code/Name	Report Date 17/Mar/2025 10:55AM		
Ref. Lab/Hosp			

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CPK- NAC (Creatinine Phospho Kinase)	310.0	U/L	<170
CPK NAC Serum, IFCC			
Comment:			

Creatine Kinase (CK), also known as creatine phosphokinase (CPK) or phospho-creatine kinase, is an enzyme which is found primarily in skeletal muscle, cardiac muscle, and brain tissue. Elevated levels of CK are associated with myocardial infarction and various muscle disorders. Creatine kinase in the blood may be high in health and disease. This means creatine kinase in blood may be elevated in a wide range of clinical conditions including the use of medication such as statins; endocrine disorders such as hypothyroidism, and skeletal muscle diseases and disorders including malignant hyperthermia, and neuroleptic malignant syndrome.

.IMMUNO BIOCHEMISTRY-1

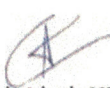

Test Name With Methodology	Result	Unit	Biological Ref.Interval
CPK- MB (Creatine Kinase MB)			
CPK-MB	5.44	µg/L	0.00 - 6.22

Serum, Electro Chemi Luminescent Immuno Assay

COMMENT:

CK-MB levels, along with total CK, are tested in persons who have chest pain to diagnose whether they have had a heart attack. Since a high total CK could indicate damage to either the heart or other muscles, CK-MB helps to distinguish between these two sources. The level of CK-MB in blood help to determine the efficacy of a clotdissolving drug in the following way: When the clot dissolves, CK-MB tends to rise and fall faster.

If the value of CK-MB is elevated and the ratio of CK-MB to total CK (relative index) is more than 2.5-3, it is likely that the heart was damaged. A high CK with a relative index below this value suggests that skeletal muscles were damaged.
